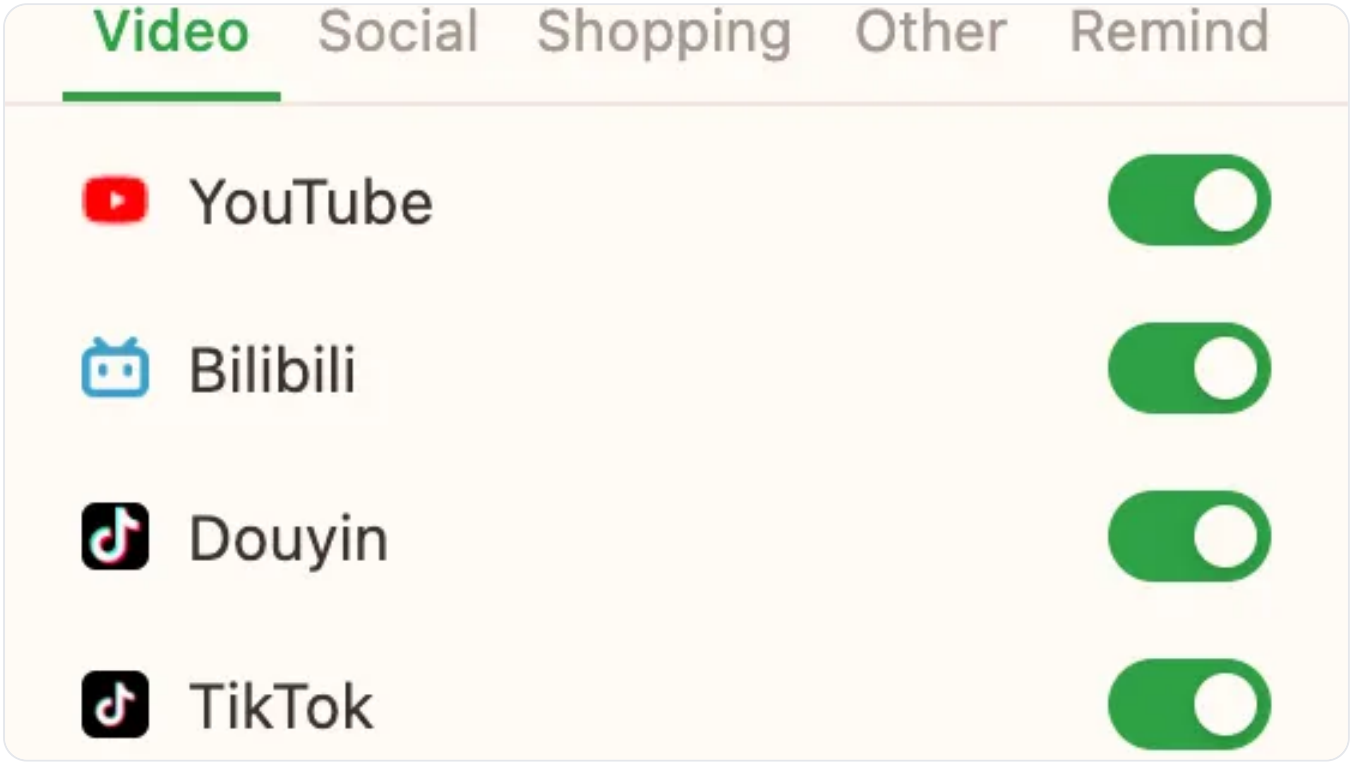
Feedless

A Chrome extension that hides algorithmic recommendations and feed clutter so you can stay focused.



About

Feedless is a browser extension for blocking algorithmic recommendations on social media so you can stay focused. It is designed for people who open a site to check one thing and then get pulled into suggested content, feeds, and other attention traps. By hiding recommendation areas and homepage feeds, the extension helps reduce distractions without changing how the rest of the site works.

What is Feedless

Feedless is a browser extension built to block algorithmic recommendations on social

other distracting parts of a page so you spend less time on autoplayed or recommended content. If you are trying to cut down on endless scrolling, Feedless offers a focused browsing mode at the browser level rather than inside each social platform.

The extension's listing says it is made to help users stay focused by removing recommendation-heavy elements that often keep people on a site longer than intended. Feedless is available in the Chrome Web Store, and the store listing shows version 0.3.0 with an update date of July 14, 2026. The extension size is listed as 70.75 KiB.

Key features

Feedless centers on a narrow but useful set of focus tools for social browsing:

- Hides homepage feeds that can lead to unplanned browsing.
- Removes recommendation sections that push additional content.
- Blocks other distracting page elements where supported.
- Helps reduce algorithmic recommendations on social media sites.
- Works as a Chrome extension rather than a separate website or app.

The app store data also shows that the developer has declared it does not collect or use your data. The privacy notes further state that data is not being sold to third parties and is not being used for credit decisions. Language support listed in the store includes English, français, [illegible], [illegible], and [illegible].

Feedless is best understood as a feed blocker for attention management. It is not a social network, and it is not a content discovery tool. Its value is in removing the parts of a page that are most likely to trigger more scrolling.

How to use it

Using Feedless is straightforward because it is distributed as a Chrome extension.

- Open the Chrome Web Store listing for Feedless.
- Add the extension to Chrome.
- Visit social sites or other pages where recommendation blocks tend to take over.
- Check whether homepage feeds or suggested-content modules are hidden as

- Adjust your browsing habits around the areas the extension removes, especially if you rely on feeds for discovery.

Because the listing does not describe advanced controls, it is safest to assume the tool works as an on/off style blocker rather than a complex dashboard. If you need to test whether Feedless fits your workflow, start with the sites where algorithmic recommendations are the biggest problem, such as homepages and recommendation-heavy sections.

Who it is for

Feedless is a good fit for people who want a lighter browser-based way to reduce distractions. It may be especially useful for:

- Students who want to stay on task while researching.
- Remote workers who open social sites for a quick check and lose time.
- People trying to reduce doom-scrolling.
- Users who want to hide feeds instead of deleting accounts.
- Chrome users who prefer a simple extension over a full productivity system.

The extension is also relevant for anyone who finds that recommendation engines, not the main content itself, are what derail focus. If your work often requires visiting social platforms but you do not want the homepage feed, Feedless can help trim away some of the noise.

What to know before you use it

Feedless is a focused tool, not a universal content blocker. It targets recommendation areas and feeds, so it may not remove every distraction on every site. Sites change their layouts often, and feed blockers can lose effectiveness when page structures are updated.

A few practical caveats matter before you install a browser extension like Feedless:

- It is listed for Chrome, so browser support outside Chrome is unknown from the source material.
- The listing does not mention offline use, mobile apps, or a companion service.

No rating data is available yet in the store listing.

If a social platform changes how recommendations are rendered, the extension may need updates to keep working well.

Feedless is most useful when you want a cleaner browsing surface, not when you need official platform controls or account-level settings. For reporting, moderation, analytics, or policy-related tasks, use the social platform's own tools instead of relying on a feed blocker.

If your main goal is to make social media less addictive and less distracting, Feedless gives you a direct way to block algorithmic recommendations on social media and keep your attention on the task in front of you.
